Your Automation Solutions Front and Center

Grow your bottom line with new leads, new business

The Automated Shop Conference (TASC) launched successfully in the fall of 2023 as a dynamic new conference and supplier showcase focused on helping CNC shops expand into manufacturing automation. Building on its initial momentum, TASC returns in 2024 at the **International Manufacturing Technology Show (IMTS)** for one full day of expert technical content, networking introductions and a guided tour of the IMTS Automation Sector on the IMTS show floor.

WHY IMTS 2024?

With more than 85,000 potential buyers expected to attend, IMTS is the largest manufacturing tradeshow and educational event in the world. IMTS 2024 will feature an Automation Sector, drawing in prospects to check out robotics, software and intelligent automation solutions. IMTS is *the* show CNC machinists attend to find automation solutions and TASC is the only co-located event solely focused on exposing those solutions.

WHO WILL YOU MEET?

Connect directly with machine shop owners, managers and technical leaders from machine shops of all sizes who are actively transitioning to lights-out machining and automating mid- to high-volume production operations.

WHAT MAKES TASC UNIQUE?

TASC's technical program is entirely centered on the needs of CNC machining operations. Plus, TASC uses the power and reputations of the *Modern Machine Shop*, *Production Machining* and *MoldMaking Technology* media brands to reach and engage with qualified manufacturing technicians and decision makers.
